When I discovered the software engineering internship with BuzzFeed, I was excited by the opportunity to create new product code for BuzzFeed. I have always loved how fun BuzzFeed is, the quizzes, the videos (especially tasty), and just the culture in general. Being a Junior majoring in Computer Science at Virginia Tech, I enjoy developing and improving testing technologies. My coursework, past internships, and campus involvement have prepared me well for this position.

- **Coursework.** After completing courses in software development methods, programming languages, network systems, and embedded system design, my Major GPA is 3.8.
- **Past internships.** As an intern for Fig for two summers, and SimonComputing, I contributed to the company by designing and implementing hundreds of tools used on the website. Currently I work at SynaptiCAD as a Software Engineer.
- **Campus involvement.** As a member of the Association for Women in Computing, I attend Tech Talks and conferences to expand my industry knowledge and network with full-time professionals. I am also the Treasurer of a K-pop dancing crew called Exodus.

I have experience with Java, Python, JavaScript, Linux, Git, and Ruby. This knowledge will be an asset to this position. I would be thrilled to learn more alongside your cross-functional team of engineers and developers.

My enclosed resume expands on my coursework, employment, and campus involvement. As I prepare for a career in computer science, I am dedicated to gaining practical experience to complement my coursework. Thank you for your time and consideration. I look forward to hearing from you soon.

Sincerely,

Lin Chen
